'Hotbox Sirocco' 1.8kW Fan Heater

INSTRUCTIONS

The 'Sirocco' electric fan heater has the fittings to be either hung by chains, or, free standing by attaching the four feet to the base. Choosing the right position is important to ensure maximum benefit from the air movement created and heat produced. All greenhouses are different, therefore no firm recommendations can be made.

Install with the back away from the glass to ensure free air movement through the heater.

OPERATION

1. A three position switch is fitted for the control of the fan and heat:

'FAN WITH HEAT' – heating element/s controlled by the thermostat

'OFF'

'FAN ONLY' - The 'Fan Only' selection will give air movement in the greenhouse, which will help overcome airborne diseases such as Botrytis and Mildew

2. Thermostat control dial

In the winter, the heating elements can be used and controlled by the thermostat.

CAUTION

The Sirocco is designed for commercial use only
Do not block the ends of the heater
Ensure the heater is earthed

<u>Specifications</u>	
Heat out-put	Max. 1.8kW
Air movement	400m ³ /hr
Voltage	220/240 AC 50Hz
Current	Max. 6.5 Amps

Tampering with the Heater will invalidate the guarantee.

The control box should only be opened by a qualified electrician.

Do not insert fingers or obstructions through the grill on either end of the heater
